

Bettar el Moctar, studied Naval Architecture at the University of Hamburg/Germany. He graduated in 1997 and has since then worked as a research assistant at the same University, where he has specialized in computational fluid dynamics. He completed his doctorate at the University of Technology Hamburg with a dissertation entitled "Numerical Computation of Forces Acting on Maneuvering Ships". In 2000 he joined the Hamburg Ship Model Basin and worked as a research engineer. He was head of the Department of fluid dynamics at Germanischer Lloyd/Germany from 2002 to 2008 and global head of research at DNV GL advisory services/Germany&Norway from 2013 to 2016. Since 2008 he has been working at the University Duisburg-Essen as a full professor and the director of the shallow water model basin DST/Germany. He is editor and co-editor of several international journals and has been a member of different international committees. His publications cover various aspects of hydrodynamics and Fluid-Structure-Interaction. The focus of his research covers seakeeping, hydroelasticity, cavitation, slamming and sloshing, maneuvering, and propulsion in waves. (<https://www.uni-due.de/IST/elmoctar.php>).
